

# Water Street Bridge over Camp Creek

## Fact Sheet

### About the Project

The existing 66-year-old bridge has several structural deficiencies that need to be addressed. The structure has exceeded its expected service life and needs replacement. The bridge provides an important roadway link for the adjacent community and the Howbert Elementary School, located adjacent to the project area. The Pleasant Valley neighborhood backs up to Garden of the Gods Park and has limited access routes to accommodate normal traffic and access for emergency services.

### Project Funding

Funding for the project is through a combination of the Colorado Department of Transportation (CDOT) Off-System Bridge Grant and Pikes Peak Rural Transit Authority (PPRTA) Emergency Bridge Fund. The overall project cost is estimated at \$5 million dollars.

### This Project Will:

Ensure safety and accessibility by replacing the old bridge, improve hydraulic capacity and protect existing utilities while maintaining critical community roadway links for vehicles, pedestrians, and cyclists.

### Project Schedule

- **Stakeholder Input:**  
Early Fall 2024
- **Design complete:**  
December 2024
- **Construction begins:**  
Late Summer 2025
